GBIC Operational and Electronic Verification Report

Product Number: SFP-10G-SR

Description: 10GBASE-SR SFP+ transceiver module for MMF, 850-nm wavelength, LC duplex connector SFP+ 850nm 10GbE SR MMF,Gen2 CS5

The Cisco 10GBASE-SR Module supports a link length of 26m on standard Fiber Distributed Data Interface (FDDI)-grade multimode fiber (MMF). Using 2000MHz*km MMF (OM3), up to 300m link lengths are possible. Using 4700MHz*km MMF (OM4), up to 400m link lengths are possible.

Vendor/Mfr. Name: CISCO-AVAGO

BPN: COUIA8NCAA **VPN:** 10-2415-03

Date Manufactured: 2/14/2013

Vendor Part Number: SFBR-7702SDZ-CS5

Vendor Rev: V03

Serial Number: AGA17074SPB

MFR. Rev: G2.5

Latch Color: Beige

Type Identifier: SFP

Module Definition Extended Identifier: SFP Function defined by Serial ID

Transceiver Code: 10G Base-SR

Serial Encoding Algorithm: 64B/66B

Type of Connector: LC

Link Length: OM1=20 Meters / OM2=80 Meters / OM3=300 Meters

OUI Verification Via IEEE Registry:

Here are the results of your search through the public section of the IEEE Standards OUI database report for 00-17-6A:

| | | |
|----------|-----------|---------------------|
| 00-17-6A | (hex) | Avago Technologies |
| 00176A | (base 16) | Avago Technologies |
| | | 350 West Trimble Rd |
| | | San Jose CA 95131 |
| | | UNITED STATES |

Your attention is called to the fact that the firms and numbers listed may not always be obvious in product implementation. Some manufacturers subcontract component manufacture and others include registered firms' OUIs in their products.

All entered information is treated confidentially on a per account basis. However, it may be communicated to authorities upon judicial order, search warrant, or as part of an evidentiary legal process or investigation. Individual product test data is used to do summary test 'Verification' of product assurance throughout the channel supply process and is reported as a PASSED or FAILED VST-Assurance test condition with a high level description upon a failed test. The verification tester's ID is identified on reports by their VST account number and initials. Verification, failure, and summary reports are provided by the Verification Systems Technology's Verification Systems Technology's Assurance (VST-Assurance) Service application. All Part Numbers, Serial Numbers, Revisions, Vendor/Mfr. Name, Date Manufactured, Vendor OUI Codes, Latch Color, PID, VID and more are read from capture reports run directly on the device. The capture reports are analyzed and then recorded during the operational Verification Test. Depending on the manufacturer, some tests or parameters are specified by the manufacturer of the device and maybe unique and specific to the product's manufacturer. The OUI Verification is a referenced focused screen capture of IEEE OUI Verification on the IEEE public web site. Note: The duplicates (serial numbers and more) tests are compared against all other tested units within this global verification system. The PE Match (Physical/Electronic) and its failure description are part of a comparison test performed by the Tester between the electrically read information and the physical information on the device. VST is continually improving and adding new tests and capabilities to the overall test environment and on a specific equipment vendor basis. Test Enhancements (TEs) are applied at the time of the test enhancement. © 2013 Verification Systems Technology, LLC. All Rights Reserved.
